

FOR IMMEDIATE RELEASE:

Cincinnati's Thunderbolt Systems puts VTC Elevation Series Line Array to work with Stomp.

Toronto Ontario, December 21, 2008 – Thunderbolt Systems' new VTC ProAudio Elevation Series vertical line array system was put to good use with the Aronoff Center production of the Broadway hit *Stomp*. The full Elevation Series system was delivered in November 2009, and is the largest collection of VTC equipment in use as a touring pro-audio system in the United States to date.

The current system is comprised of 32 VTC Elevation Series EL210T high-mid range cabinets, and 32 ELS212T subwoofers with additional cabinets to be added to the system in the early part of 2009. Powered with VTC V64 & V42 power amplifiers, the full Elevation Series vertical array is controlled by the proprietary DLMS4080 digital processor.

Thunderbolt Systems continuing dedication to high production quality and complete customer satisfaction has led them to choose VTC ProAudio Elevation Series vertical array systems in a move they describe as a bold statement in quality and innovation.

Balcony view in Cincinnati's Aronoff Center of VTC Pro Audio's Elevation Series EL210T and ELS212T cabinets as deployed by Thunderbolt Systems for a week-long run of the touring show of 'Stomp'.
